How to Measure Your Pet

Height: Measure your pet from the shoulders to the chest, just behind the front legs.

Width: Measure your pet from the widest part.

We recommend the "cardboard test" to ensure the correct size for your pet. Using the opening size measurement, cut a hole in a piece of cardboard, and see if you pet can pass through easily. Pets duck their heads as they push open their door and step through it, so ideally you should install the pet door with the top of the opening just above your pet's shoulder.

What Dog Lovers Say About Plexidor®

"Just wanted to tell you how pleased I am. After six years and all the abuse a big dog can give it, your door still works great, and it's still silent. I will definitely be ordering the Plexidor again when the time comes."

-Darin Hagerman, Effort, PA

"I have had your Plexidor for several years now. Here in Las Vegas our summer heat exceeds 115 degrees. In the summer, your doors allow the entry way to remain cool and keep the dust under control."

-Michael Bialac, Las Vegas, NV

"Though your Plexidor comes with only a 3-year warranty, I want to let you know how good it is: 14 years with no problem! It was the right choice then, and I think it would be the right choice for anyone who buys a Plexidor today."

-Maureen O'Connell, North Redding, MA

"Our life has been heaven and the reduction in air conditioning bills will more than pay for itself in no time. I just can't say enough about how happy we are with the Plexidor and all it's done for our 'doggy' boys and us."

-Charles and Bonnie Wallace, Weatherford, TX
